Ruggedized DC/DC Converters
Product Portfolio 2018

An aerial, night-time photograph of a railway bridge. The bridge structure is dark, but the tracks are illuminated with a bright red glow, creating a strong diagonal line across the frame. The background shows the complex network of steel beams and supports of the bridge.

Ruggedized DC/DC converters for railway and industrial applications

DC/DC converters for railway and ruggedized industrial applications must withstand greater disruptive forces than most stationary applications and are subject to greater demands for operational safety, durability and thermal shock. European standards EN 50155 and EN 61373 were established to provide internationally recognized standards for these type of applications. These standards are now considered to be the defacto symbol of quality, indicating robustness, reliability and durability in the railway and transportation sectors and applications with extreme environments.

EN50155 defines the minimum input requirements for DC/DC converters as follows:

Bus Voltage	Continuous input voltage range	Brownout 100 ms	Transient 1 sec	TRACO POWER railway DC/DC input ranges
24VDC	16.8-30.0V	14.4V	33.6V	Satisfied by 9~36 VDC input range products
37.5VDC	26.2-47.0V	22.5V	52.5V	Satisfied by 18~75 VDC input range products
48VDC	33.6-60.0V	28.8V	67.2V	Satisfied by 18~75 VDC input range products
72VDC	50.4-90.0V	43.2V	100.8V	Satisfied by 43~160 VDC input range products
96VDC	67.2-120.0V	57.6V	134.4V	Satisfied by 43~160 VDC input range products
110VDC	77.0-137.5V	66.0V	154.0V	Satisfied by 43~160 VDC input range products

EN 50155 sets these additional requirements:

- Galvanic isolation to protect electronic circuits
- Standards for immunity and susceptibility from conducted / radiated noise
- Relative humidity levels up to 95% relative for 30 consecutive days

EN 61373 defines that DC/DC converters must provide continuous operation under these stresses:

- Random vibration - frequency range of 5-150 Hz @ 5grms (5hrs per axis)
- Shock - peak acceleration of 5g/2g/1g (duration: 50ms/20ms/20ms.)

All TRACO POWER DC/DC converters classified as “Railway” are extremely robust and safety qualified to meet EN 50155 and EN 61373. They offer continuous operational input ranges that exceed EN 50155’s defined ranges with galvanic isolation up to 2250 VDC (input to output / input to case). Our DC/DC modules are fully enclosed and encapsulated with additional filtration circuits to protect from radiated / conducted noise while providing ruggedized mechanical protection from shock, vibration, humidity and air particles such as dust and water. The convection and conduction cooled package design of Traco Power railway DC/DC converters enable operation in extreme environments that can swing quickly from low to high temperatures ranging at least -40 to +85°C ambient. Additional qualification for the fire behaviour of components according to EN 45545-2 to ensure all our products are safe and of the highest quality for operation in extreme environments.
